

MB78L05

100mA POSITIVE VOLTAGE REGULATOR

General Description

The MB78L05 series are three terminal positive regulators designed for a wide variety of applications including local, on-card regulation.

This series of regulators are complete with internal current limiting, thermal shutdown protection, and safe-area compensation which make them virtually immune from output overload. If adequate heat sinking are provided, these regulators can deliver output currents up to 100mA.

The MB78L05 series are available in TO-92 (bulk or ammo packing), SOP-8, SOT-89 packages.

Features

- Output Current up to 100mA
- Fixed Output Voltages of 5V
- Output Voltage Accuracy of 1% over the Full Temperature Range
- Internal Short Circuit Current Limiting
- Internal Thermal Overload Protection
- No External Components
- Output Transistor Safe-area Protection
