

## 1A Low Dropout Linear Regulator

## General Description

The MB1117 is a low dropout three-terminal regulator with a dropout of 1.2V at 1A output current.

The MB1117 has been optimized for low voltage where transient response and minimum input voltage are critical. It provides current limit and thermal shutdown. Its circuit includes a trimmed bandgap reference to assure output voltage accuracy to be within  $\pm 1\%$ . On-chip thermal shutdown provides protection against a combination of high current and ambient temperature

The MB1117 is available in 1.8V, 2.5V and 3.3V versions. The fixed versions integrate the adjust resistors. It is also available in an adjustable version which can set the output voltage with two external resistors.

The MB1117 is available in the industry-standard SOT-223 and SOT-89 power package.
